

operations have had to move, of necessity, to the 902 - 928 MHz band. Higher frequency bands cannot necessarily be used for such purposes because of the high foliage losses with which many amateur operators must contend. Moreover, high powered military and aviation-related radars also use both the 420 - 450 and 1240 - 1300 MHz bands.

4. Accordingly, the issuance of this docket is a threat to the continued existence of Amateur Television repeaters and a detriment to the growth and interest in wideband experimentation. Potential Amateur Television repeater builders and individuals interested in the construction of television systems are being deterred. No one wants to invest time and money in equipment the Commission may render useless. Thus it is imperative that the Commission render a prompt decision to affirm the continued use of Amateur Television in the 902 - 928 MHz band.

For all of the foregoing reasons, the Amateur Radio Service should be allowed to continue its use of the 902 - 928 MHz band.

Respectfully submitted,

Bernhard E. Keiser, WD4O  
Technical Secretary,
